

ETDE FM Canada, a Total Facilities Management Company, is part of the Bouygues Group, a well diversified multinational organization. With successful projects and operations around the globe we established our Canadian presence in 2008 and are currently active in British Columbia and Ontario, principally in the Public Private Partnership (PPP) market.

Position: Facility Management Design and Construction Interface Manager
Location: Initially Downtown Vancouver then site based.
Salary: Dependent on experience + bonus + benefits

ETDE FM Canada has recently been awarded a significant new project in Vancouver, British Columbia, to be built by our sister company, Bouygues Bâtiment International. ETDE Facility Management will then be responsible for the delivery of facility management services, including lifecycle replacement works and energy consumption, for a period of 25 years.

We are now seeking a Facility Management Design & Construction Interface Manager who will manage the building design and approval in accordance with both company and operational requirements throughout the design and construction period. You will ensure that the facility management requirements, with particular attention to the electrical and mechanical aspects, are fully understood and are incorporated into the design. A confident negotiator and a consensus builder, you will need to influence and agree the design changes as appropriate. Excellent project management skills together with experience gained in an operational service delivery role are essential.

As part of our co-coordinated approach to the delivery of P3 projects, managing the internal sign-off processes for building fabric, mechanical, electrical engineering plant, building systems, and ensuring compliance with agreed standards, specifications, codes of practice and local legislation will be a significant element of the role. A key responsibility will be ensuring that what is designed is optimized for operation and management by our FM team during the 25-year operating period. You may also be involved with the commercial team in the development of future bids at the proposal stage, providing advice on engineering services, plant and systems selection and formulating appropriate design strategies.

Having a broad based understanding of building construction and operations, you will have direct experience of building services engineering and possess a degree or equivalent in an engineering discipline. A professional engineer designation and LEED accreditation would be a definite asset.
